SIMPLE

Funds in Health Savings Accounts (HSAs), certain Health Reimbursement Arrangements (HRAs), or Healthcare Flexible Spending Accounts (FSAs) can be used for the following types of qualified expenses. The plan you have must allow for qualified medical expenses to be paid under the requirements of IRS Section 213(d). Some plans do not allow for all of these expenses to be covered. Please check with your plan administrator or Sterling to verify the details of your plan before incurring these types of expenses for reimbursement.

Medical expenses are the costs of diagnosis, cure, mitigation, treatment, or prevention of disease, and the costs for treatments affecting any part or function of the body. They include the costs of equipment, supplies, and diagnostic devices needed for these purposes. They also include dental expenses. Medical care expenses must be primarily to alleviate or prevent a physical or mental defect or illness. They do not include expenses that are merely beneficial to general health, such as vitamins or a vacation.

Under healthcare reform, HSA, HRA and FSA funds can no longer be used to purchase over-the-counter medications (such as aspirin, allergy and cold medications, etc.) without a written doctor's prescription. The pharmacist must fill prescriptions for these medications to be paid for with funds from your account. There are still many over-the-counter medical products that can be purchased without a doctor's prescription (such as contact lens solutions and diabetic test kits and supplies), so be sure to check before you purchase.

Please note the list below is of sample expenses and intended as a quick reference guide only. Sterling cannot provide tax advice. For a list of qualified expenses, please see IRS Publication 502 Section 213(d).

SAMPLE ELIGIBLE EXPENSES
